OUR VISIT AT THE LOGIMAT 2019 IN STUTTGART

STUTTGART

Internal material flow and IT control from procurement, production to delivery were the focus of this year's LogiMAT, the international trade fair for intralogistics solutions and process management. We informed ourselves about the latest conveyor technology systems, storage and retrieval systems as well as load handling equipment, listened to various lectures and specialist forums, marvelled at demonstrations, e.g. on fire protection solutions for warehouses and logistics centres, and discussed the fascination of high-bay warehouses with decision-makers from industry, trade and service companies. Packed with innovative ideas and highly motivated, we are now again devoting ourselves to the demanding, complex planning tasks for our customers.
